

AquaSkin AI - Water Quality Dashboard

Combined drinking, skin, and hair assessment | Generated 20 September 2026, 13:27

Drinking Water

53/100

Caution

Skin Comfort

57/100

Caution

Hair Comfort

56/100

Caution

Overall assessment scores

AI model result

- Model probability: 74.5%
- Model decision at 0.50 threshold: Potable
- Model confidence: 74.5%
- Model output is not laboratory certification.

Top findings

- TDS is above the selected 500 mg/L reference.
- Chloramines are above the selected 4 mg/L reference.
- TTHMs are above the selected 80 ug/L reference.

Recommended next steps

- Confirm concerning measurements with an accredited laboratory.
- Inspect the water source and current treatment equipment.
- Retest after any filtration or softening change.
- Seek professional advice for persistent health symptoms.

Phase 1 - Drinking Water Assessment

Score 53/100 | Caution | Selected mixed reference framework

Parameter-to-reference comparison

Why the drinking score decreased

Plain-language interpretation

- TDS is above the selected 500 mg/L reference.
- TDS does not identify the individual dissolved substances.
- Very hard water is mainly a scaling/comfort indicator.
- Critical results should be verified before drinking decisions.
- Overall reference assessment: Caution.

Phase 2 - Skin Comfort Assessment

Score 57/100 | Caution | Water-comfort assessment only

Skin Comfort
57/100

Caution

Skin comfort factor contribution

Why this result?

- Hardness may affect soap performance and mineral residue.
- High TDS may reduce the clean feeling after rinsing.
- Chloramine may reduce comfort for sensitive users.
- This score does not diagnose a skin condition.

Recommended actions

- Confirm hardness and disinfectant measurements.
- Inspect existing treatment and filter maintenance.
- Consider hardness treatment only after confirmation.
- Consult a healthcare professional for persistent symptoms.

Phase 3 - Hair Comfort Assessment

Score 56/100 | Caution | Water-comfort assessment only

Hair Comfort

56/100

Caution

Hair comfort factor contribution

Why this result?

- Very hard water may increase mineral residue on hair.
- High TDS may reduce the clean feeling after rinsing.
- Chloramine may reduce comfort for some users.
- This score does not diagnose or explain hair loss.

Recommended actions

- Confirm the hardness result.
- Investigate certified hardness treatment if appropriate.
- Do not assume a shower filter softens water.
- Seek medical advice for significant or persistent hair loss.

Data Quality, Sensor Status, and Traceability

Measured versus estimated values, input record, and report limitations

Data completeness

Input and status record

Parameter	Value	Unit	Status
pH	7.2	pH units	Within selected range
Hardness	180	mg/L as CaCO3	Near selected threshold
TDS	22000	mg/L	Above selected reference
Chloramines	8	mg/L	Above selected reference
Sulfate	350	mg/L	Above selected reference
Conductivity	1200	uS/cm	Indicator only
Organic carbon	15	mg/L	Indicator only
TTHMs	120	ug/L	Above selected reference
Turbidity	6	NTU	Above selected reference

Historical trend

Historical trend unavailable

At least two valid measurement periods are required.

Traceability

- Model version: WaterNet 18-32-16-1
- Scoring-rules version: MVP 1.0
- All nine terminal inputs were supplied as measured values.
- Report generated: 20 September 2026, 13:27
